

Heterocyclic problems

Problems:

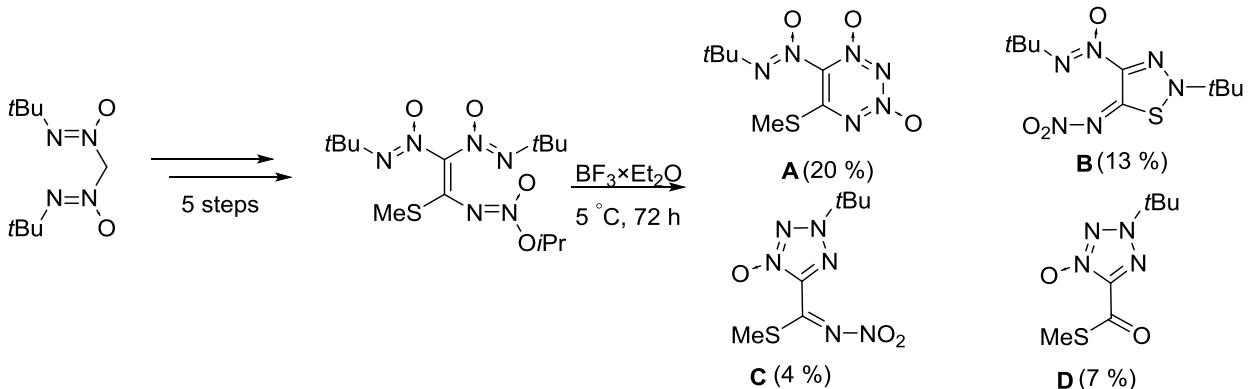

I. Write all missing compounds. Which simple and much known compound could you suggest as starting material, if the reaction from C to B includes base-catalyzed dehydration?¹

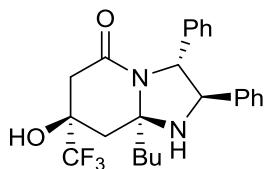

II. Propose the mechanism for first reaction. Write the missing compound.²

III. Explain the formation of four compounds A, B, C, D (target molecule is A).

IV. Suggest initial compounds for three component condensation to get following molecule.³

Solution:

Problem I:

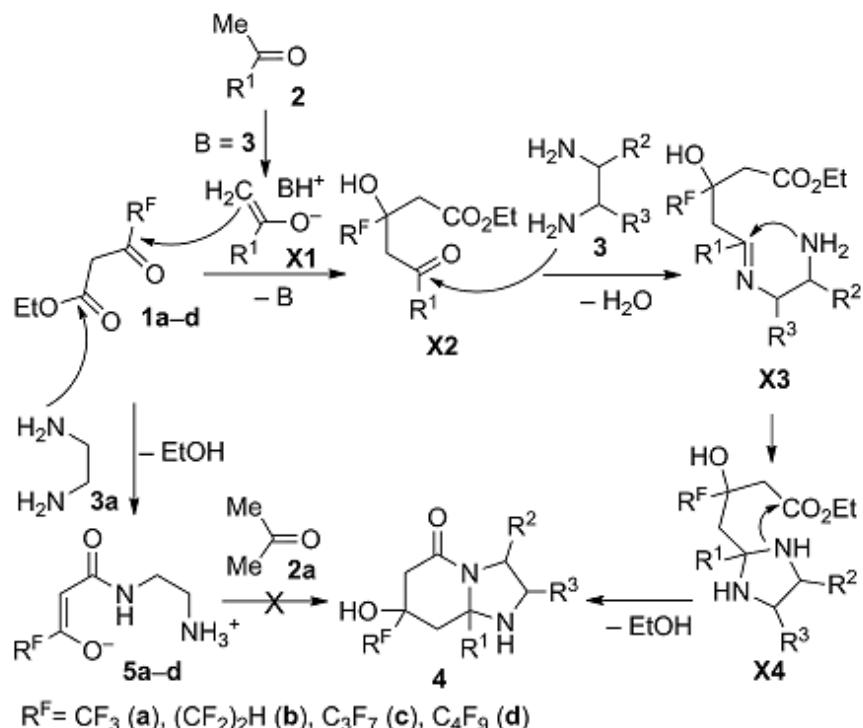

Problem II:

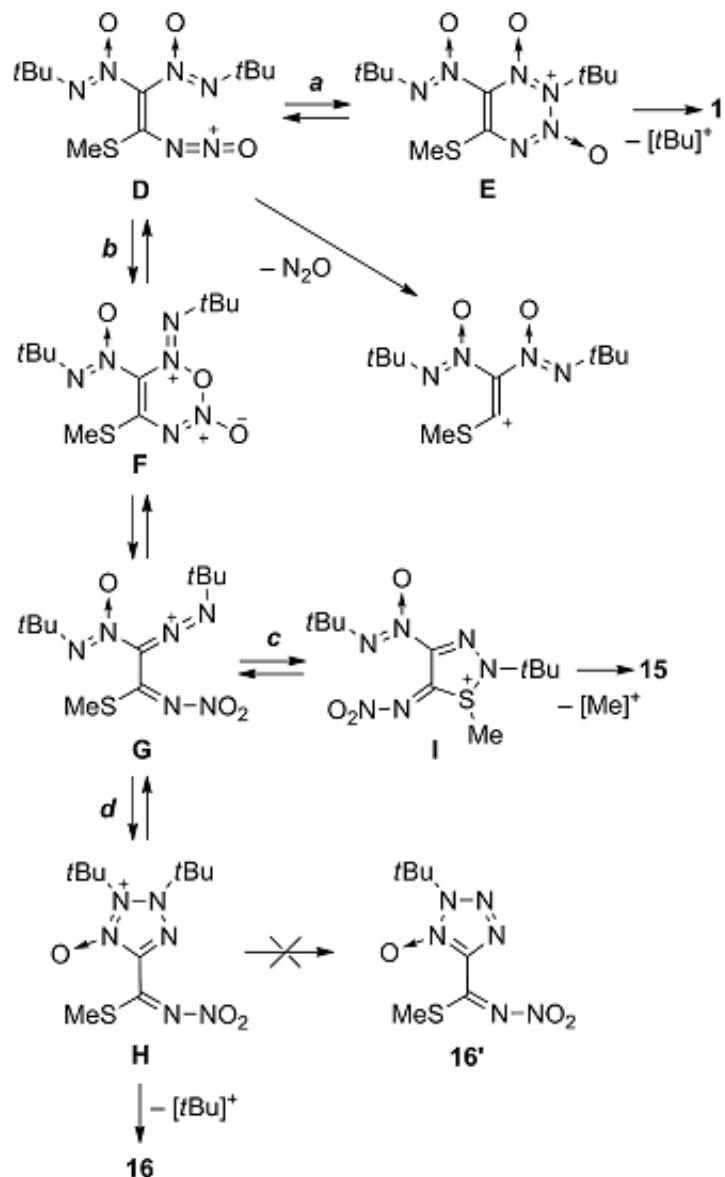

Scheme 5. Synthesis of the bisazoxymethane 4. Reagents and conditions: (a) NaNO_2 , AcOH , Et_2O , $7\text{--}10\text{ }^\circ\text{C}$, 2 h, then $25\text{ }^\circ\text{C}$, overnight; (b) LDA , THF , $0\text{ }^\circ\text{C}$, 48 h, then $\text{CF}_3\text{CO}_2\text{H}$, MeOH , $25\text{ }^\circ\text{C}$; (c) KOH , H_2O , $25\text{ }^\circ\text{C}$, 14 d.

Problem IV:

Scheme 2. A plausible mechanism for the three-component synthesis of hexahydroimidazo[1,2-a]pyridine-5-ones 4.

Problem III:

Scheme 12. Plausible mechanism for the formation of compounds 1, 15, and 16.
